

Solution Brief

Insight Application Modernisation Assessment

Helping our clients identify the benefits and business value of application modernisation.

Background

Our Assessment service guides you through a structured approach to modernising your IT ecosystems, aligned to your business goals and objectives, and details the challenges and opportunities to achieve successful application modernisation outcomes.

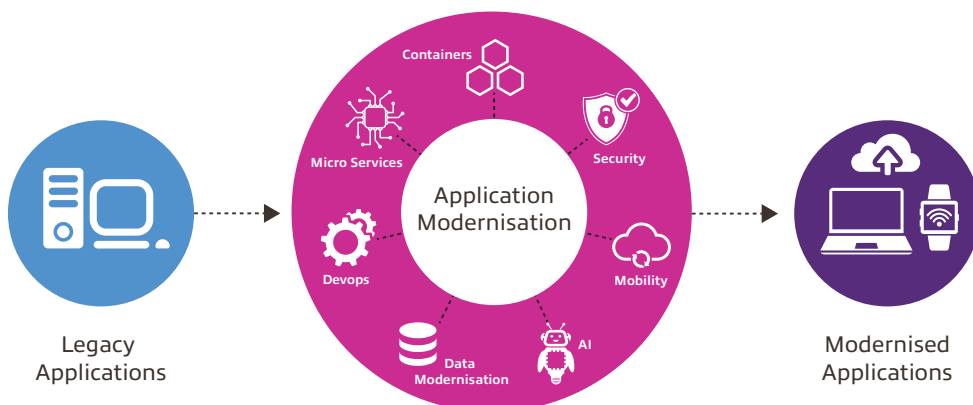

The service enables you to identify the strengths and weaknesses of your enterprise applications and proposes a modernisation roadmap as well as a framework for future improvements.

Whether your legacy applications need modernising or your existing cloud platforms lack the performance you expect from them; our experts will help you create the correct Cloud-Native architecture to ensure your organisation enhances IT operations and optimise return-on-investment.

This in-depth assessment ensures your next steps are properly understood and defined, any risks and obstacles are removed, and you're fully prepared to modernise and unlock the value of your individual applications.

Benefits

- Get a clear understanding of App Modernisation business requirements, business value and strategies.
- Develop a strategic approach that links App Modernisation solutions to your unique business goals.
- Identify options to reduce adoption risks.
- Get expert guidance from Insight's App Modernisation specialists.
- Get clarity on your applications life-cycle dependency and define the right target technologies.

Business Challenge

Organisations today understand that having a robust cloud strategy is vital to drive business transformation. However, many fail to understand the real-world and technology considerations needed to achieve a unique cloud transformation approach. Additional challenges around application modernisation typically are around cost and complexity. Migrating an application from on-premises to the cloud without a clear strategy and ROI expectations can set organisations up to fail. On the other hand, some applications might benefit from re-platforming or re-architecting but are so heavily tied to existing systems and infrastructure that the complexity of modernisation could outweigh the upside.

To ensure a successful application modernisation to realise this huge potential; you need to carry out an analysis and assessment of your current application and infrastructure, whether on-prem or in the cloud. Getting it right requires experience and expertise. Without the necessary specialised knowledge, there is a real risk of implementing a migration that doesn't deliver on its promises.

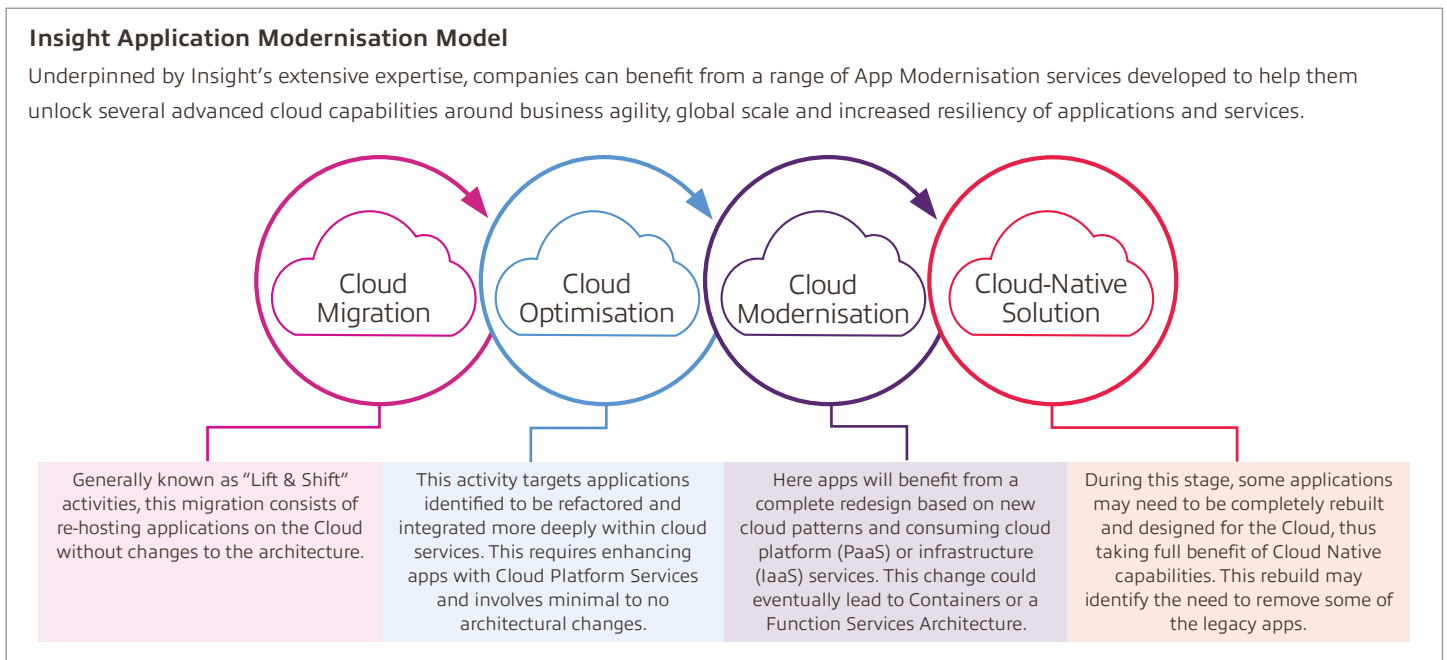

Our Solution

The Insight Application Modernisation Assessment is a strategic service that helps our clients get familiar with cloud technologies, and better understand Cloud Modernisation outcomes for their IT applications.

Our app modernisation experts support you all the way, taking into account your key considerations, and providing accurate recommendations about the most appropriate application and infrastructure modernisation journey for your business.

The service main objective is to identify the correct Cloud Native architecture and deliver a modernisation roadmap that aligns with our clients' objectives around driving business efficiency, enhancing IT operations and ROI optimisation.

Our Application Assessment consists of 3 phases:		
Discovery Phase 	Analysis Phase 	Delivery Phase 
Collect Application resources and run PMA tools.	Identify modernisation drivers, analyse agreed KPIs and use maturity models to mitigate risks.	Produce a report including a cloud modernisation plan & roadmap.

Why Insight?

We have the experts, the skills, knowledge, tools, and processes – including reference architectures – to guide you through the "what" and "how" of assessing your applications to ensure a successful modernisation.

								
Global scale & coverage	Operational excellence & systems	Software DNA	Services Solutions	Data centre transformation	Next-generation tech skills	App dev & IoT expertise	Insight Digital Workspace™	Partner alignment
