

INSIGHT SECURITY SOLUTIONS

Assess. Minimise. Prevent.

All organisations today are almost certain to suffer a security breach at some point. Covering the entire security continuum, our security experts will fully support IT departments by assessing, designing, installing and supporting a tailored, multi-vendor end-to-end solution that protects systems and data across the whole organisation. We'll help you mitigate the risk and ensure that if you do suffer a breach you can demonstrate that you have done all you can to protect sensitive data, as well as reducing and containing the impact of any breach so that important business operations can continue unimpaired.

Insight Security Solutions

Business challenge

Security gaps created by new technologies, BYOD and shadow IT and the demand for 24/7 “anywhere, anytime” accessibility are adding to the burden on IT departments to protect the valuable data assets on which the business relies. With much IT activity away from the relative safety of the corporate network, an organisation’s IT systems are increasingly vulnerable to threats ranging from targeted cyberattacks to unwanted intrusion to simple human error.

Our solution

With wide-ranging experience across multiple sectors and strong partnerships with major security vendors, our security consultants will help you create the best possible security backbone for your organisation, allowing you to concentrate on supporting business-critical operations.

We’ll assess your IT’s risk and vulnerabilities, and design robust “defence in depth” hardware and software solutions to maximise protection across your servers, endpoints and mobile devices.

From firewalls to encryption, from intrusion detection systems to intelligent alerting, we’ll ensure you have total control and visibility of your IT estate. In addition, monitoring and alerting services will detect anything that slips through the net, providing the intelligent logging and forensic detail that will allow you to minimise the impact of any breach and rapidly enable full business recovery.

15% of large organisations had a security or data breach in 2015 involving smartphones or tablets.*
