

Insight Consolidated Billing for AWS

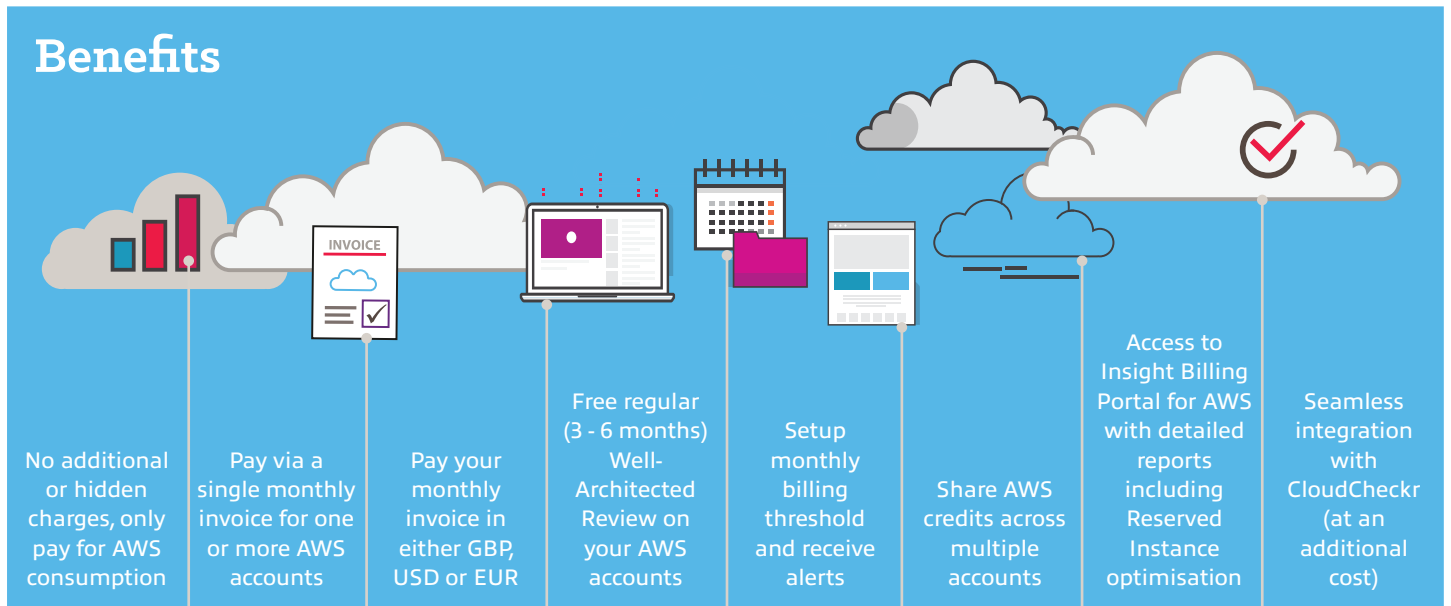

Helping clients simplify their monthly AWS payments via a seamless and consolidated billing process.

Over the years, businesses have mostly procured IT infrastructure via a direct purchasing process and in many cases find it challenging moving to a different payment method that requires a credit or debit card to consume cloud services.

Procuring services through the Amazon Web Services account via the aws.amazon.com portal typically involves providing personal and payment information such as credit or debit card details.

However, card payments sometimes come with their own set of risks and charges (for credit cards) and don't offer the opportunity to have a consolidated invoice view for multiple accounts, making them not the most efficient form of payment.

Why not pay for your AWS monthly bill via a simple billing process and eliminate the risks related to paying via credit card.

Our Solution

Insight provides a consolidated billing service for AWS that enables clients to have a centralised view across all their bills and pay for their consumption via a monthly invoice issued by Insight. To get on-boarded onto the Insight billing platform, all clients'

AWS accounts will need to join the Insight Master Payer Account through the simple account linking process. At the end of the billing cycle, Insight will aggregate the AWS consumption across the accounts and issue a single invoice to the client.

Our approach to consolidated billing
